HANDY TIPS

Always read the label, hard to believe it, it does help !!!

P H

This is to indicate if the water is Scale - Forming - or Acidic. The scale of 0 - 14 where 7 is neutral.

7.4 is ideal for pools.

In soft water areas you may need to use

P H Increase (Soda Ash)

P P M

Chlorine is normally described in parts per million

Between 1 and 3 is ideal.

Shock Dose

This is to rise the chlorine levels usually to 10ppm this would normally help prevent algae forming and would help with other water problems.

Turnover

This indicates the filter rate. Normally in number of hours, which is the time it takes to filter the capacity of the pool.

Testing

Depending on the type of testing equipment you have, this should enable you to test the chlorine levels, PH and alkalinity. You should test the pool water regularly, under no circumstances should you ever guess.

Water balance This is the term used to establish the nature of the water i.e.; is scale forming in the water or is the water acidic? Water adjustment in the smaller, above ground pools may not always be suitable.

Alkalinity The measure of alkalinity salts relevant to water balancing. This again is not always relevant in the smaller above ground pools.

Filtration Insure that your filtration system is turned on once or twice per day for a minimum period of time. Depending on the size of your pool this will vary considerably. This must be increased with the warmer weather and the increased use.

Mixing When mixing chemicals, always fill the container with water then add your chemical to the water.
NEVER THE OTHER WAY ROUND

Please feel free to telephone for advise, we are here to help.

All the information in this catalogue is intended as a guide.

We would recommend that you always use a reputable dealer or engineer on any major work on your pool.

Always read the label and never mix chemicals.

The misuse of chemicals can cause serious injury or death.

Above Ground Pool Measurement Guide

Pool Volumes: To calculate the volume in cubic metres.

Length x Width x Average Depth = Cubic Metres

Length x Width x Average Depth x 6.25 = Cubic Gallons

Round Pool Measurement Guide

Radius x Radius x 3.142 x Depth = Cubic Metres

1 Cubic Metre = 1000 litres

Typical examples of above ground pools

12 foot x 3 foot approx 2000 gallons (9 cubic metres)

12 foot x 4 foot approx 3000 gallons (14 cubic metres)

15 foot x 3 foot approx 3500 gallons (16 cubic metres)

15 foot x 4 foot approx 4500 gallons (21 cubic metres)

18 foot x 4 foot approx 6500 gallons (30 cubic metres)
